

DEMOCRATIZE SPACE

1

CUSTOMIZE

Don't compromise!

We curate your satellite mission to fit your business needs. Together we iterate through the designs and components till we make it perfect.

We plan to enter into partnership with NASA to ease technology transfer and use of open source data platforms for benefit of our customers. We are designing our own satellite platform to make everything available as a service

2

MAXIMIZE ROI

Cost-Benefit Analysis is embedded in our automated launch workflow. Great engineering will help you achieve maximum return on your investment in spacetech

SATELLITE LAUNCH

RIDESHARE WITH AUTOMATED PROCESS

Control your space mission from your mobile. Get need based launch, testing, documentation, integration, logistics, insurance, ground station and data analytics services. Come and get your mission planned free of cost.

www.skizie.com

1 PLAN

We plan your mission before you build the payloads. We encourage you to come to us when you are at the drawing board for your space mission. Our mission planners will help you through till the data analysis phase of your business use case.

2 AGGREGATE

We block launch capacity in bulk with major launch providers. We currently offer launch at LEO & SSO orbits and experiments aboard the ISS. Choose your orbit and mission parameters and join rideshare with other satellite owners. You are free to choose the extent of payload customization, launch or ancillary services and the most convenient payment option.

3 TESTING

We have certified labs in the US that take care of the entire spectrum of testing requirements:

- Environmental Tests
- Qualification Tests
- Acceptance Tests
- Day in the Life (DITL)
- Dynamic Environment Testing (Vibration/Shock)
- Thermal Vacuum (TVAC) Breakout Testing

SPACE AS A SERVICE

4 INSURANCE

Insurance agreements are time consuming, and third-party liability insurance with external launch providers make it tricky.

We navigate you through this entire insurance process for:

- Pre-Launch insurance
- Launch insurance
- In-orbit insurance
- Launch + Life insurance

Logistics

We offer logistics as a service – primarily to launch provider locations outside the USA

5 LAUNCH

We make it simple through our automated launch process.

Regulation, compliances, testing, integration, interfaces, logistics, insurance, ground stations, telemetry, data downlink and so on...

We facilitate interaction with our launch providers and commercial service providers.

Give your launch docket and allow us to manage end to end.

6 GROUND STATIONS

You need a mission control center when you launch. We provide it for you and connect it from ground stations around the world through our partners. This takes care of your telemetry and data downlink needs for your application.

We declare a success when you receive the first pings from your satellite through our ground stations. But what after that?

7 DATA ANALYTICS

The data access APIs, the analytics and the GUI for decision making makes your use case come alive. We will provide these APIs and GUI frameworks to you and even show you how to integrate your app with others on our proprietary platform.

We have ready-to-use applications for the agriculture, energy and maritime industries using our APIs and GUI frameworks.

Reach out to us for more details.

We are waiting to see you fly!
